

Failure To Complete Experiment

Equipment Problem:

There will be no penalty provided you thoroughly explain in the *Discussion of Results*, as much as is relevant to the particular experiment, the following:

- the theory/concept/procedure
- what you would have observed had you been able to complete the procedure
- connections to previous physics theories or concepts you have studied

Student Procedural Error:

The full penalty will apply to all missing components of your report.

Note that, regardless of why your team has a problem with the experimental procedure, your TA and the lab physicist will do their best to find and fix the problem.
