Motion Experiment

Because this experiment is mostly qualitative in nature and has multiple parts, the 'presentation of results' requires some thought. The following is a suggested form and intended only as a guide.

Results

Each heading should be followed by a short statement (or two) summarizing the main principle(s) explored in lab below.

Part 1- Distance plots

Part 2- Graph matching plots

Part 3- Velocity plots

Part 4- Bouncing ball

Part 5- Cart on incline

Please note that this format makes it easier to form your discussion points since they should validate or explain the statements summarized in each part separate part above.
