

Phys 727 Lecture Notes – Index

Adiabatic index or constant	3	Fluctuation-response relations	9, 11
Adiabatic transformation	1	Fock space	13
Binomial distribution	6	Force, generalized	1
Black-body spectrum	18	Fourier's law	31
Bohr magneton	23	Fugacity	11, 18
Boltzmann constant	4	Fundamental identity of thermodynamics	1
Bose-Einstein condensate	17	Gaussian distribution	6
Bose-Einstein function	17	Gibbs free energy	
Bosons	13, 17	— in thermodynamics	2
Canonical state		— from canonical distribution	12
— classical distribution function	9	Gibbs paradox	10
— quantum density matrix	12	Gibbs-Duhem relation	2
Central-Limit Theorem	6	Grand canonical distribution	11
Chemical potential	1	Grand potential	
Classical limit	14	— in thermodynamics	2, 11
Clausius-Clapeyron equation	5	— from grand canonical state	13
Cluster expansion	21	Gyromagnetic ratio	23
Coefficient of viscosity	31	Hamiltonian, Hamilton equations	7
Compressibility	3	Harmonic oscillator	11
Correlation function	6	Heat	1
Critical phenomena	[28]	Heat capacity	3
Critical point	4	Helmholtz free energy	
Curie temperature	24	— in thermodynamics	2
Debye model of a solid	18	— from canonical ensemble	12
Debye temperature	18	Ideal gas	4
Density of states	17, 18, 19	Intensive variables	1
Detailed balance	27	Irreversibility	[33]
Diamagnetism	23	Ising model	
Distribution function	7	— 1-dimensional	26
Dulong-Petit law	18	— 2-dimensional	25
Einstein model of a solid	18	Kadanoff transformation	25
Electric conductivity	30	Law of Corresponding States	4
Energy		Legendre transform	2
— in thermodynamics	1	Lennard-Jones potential	22
Ensemble	7	Liouville space	13
Enthalpy	2	Liouville theorem, equation	7
Entropy		Liouvillian operator	13
— in thermodynamics	1	Liquid	4
— from canonical distribution	12	Liquid-gas transition	5
Equation of state	1	Macrostate	7
Equipartition of energy	10	Magnetic susceptibility	10, 23, 24
Ergodic system	8	Magnetization	10, 23, 24
Euler equation/theorem	2	Markov process	27
Extensive variables	1	Master equation	27
Fermi energy	19	Maxwell construction	5
Fermi function	13	Maxwell relations	3
Fermions	13, 19	Mean (of a distribution)	6
Ferromagnetism	24	Metropolis algorithm	27
Fick's law	30	Meyer function f_{ij}	21, 22
First law of thermodynamics	1	Microcanonical state	
Fluctuation-dissipation theorem	9, 31	— classical distribution function	8
		— quantum density matrix	12
		Microstate	7

Mixing system	8
Molecules	15
Moments (of a distribution)	6
Monte Carlo method	
— in general	27
— applied to the Ising model	28
Occupation numbers	13
Onsager's regression hypothesis	31
Paramagnetism	10
Partition function	9
Phase transition	5
Phases of a system	4, 5
Phase space	7
Phonons	18
Photons	17
Planck spectrum	17
Poisson distribution	6
Probability	6
Random walk	6
Renormalization group	26
Rotational degrees of freedom	15
Rubber band	4
Sackur-Tetrode formula	8
Second law of thermodynamics	1
Self-diffusion	30
Stability conditions	3
State of a quantum system	11
Stefan-Boltzmann constant, law	18
Superconductivity	
Superfluidity	
Temperature	1
Thermal coefficient	3
Thermal conductivity	31
Thermodynamic limit	7
Thermodynamics	1
Third law of thermodynamics	1
Transport	31
van der Waals equation of state, gas	
— phenomenological	4
— derivation	22
Variance	6
Vibrational degrees of freedom	15
Virial expansion	
— defined	4
— derived from statistical mechanics	21
Viscosity	31
Von Neumann equation	13
Wien's law	17
Work	1
Zeroth law of thermodynamics	1
